UniRouter Design Specification v1

Version: 1.0

Status: Implementable

Audience:

- Founder
- Product
- Design
- Frontend

---

1. Purpose

This document defines the operational UI specification for UniRouter.

The goal is not visual beautification.

The goal is to transform UniRouter from a CRUD admin panel into an Enterprise AI Activity Control Plane.

---

2. Design Objectives

Priority order:

P1 Visibility

P2 Control

P3 Intelligence

P4 Branding

Every screen must help users answer:

1. What is happening?
2. Is it healthy?
3. What needs attention?
4. What action should I take?

---

3. Navigation Architecture

Current

14 flat menu items

High cognitive load.

No hierarchy.

No grouping.

New Navigation

4. Layout System

Global Layout

Sidebar Width

240px

Collapsed Width

72px

Header Height

56px

Content Max Width

None

Use full-width operational layout.

Page Padding

24px

Desktop

16px

Laptop

---

5. Page Template System

All pages must use one of three templates.

No exceptions.

Template A

Resource Management

Examples:

Channels

Keys

Users

Pricing

Settings

Structure

Page Header

Filter Bar

Data View

Action Drawer

Template B

Explorer

Examples:

Logs

Audit Logs

Reconciliation

Structure

Search Panel

Filters

Result Table

Detail Panel

Template C

Analytics

Examples:

Dashboard

Wallet

Structure

KPI Row

Trend Area

Distribution Area

Event Feed

---

6. Dashboard v2

Goal

Show enterprise AI activity.

Not configuration.

Section 1

KPI Cards

Total Requests

Success Rate

Average Latency

Today's Cost

Height

120px

Cards

4

Section 2

Activity Trend

Use existing daily_trend API.

24h trend chart.

Full width.

Height

320px

Section 3

Top Models

Ranked by request volume.

Table or horizontal bars.

Top 10.

Section 4

Channel Health

Channel

Status

Fail Count

Circuit State

Section 5

Recent Events

Timeline

Not table.

Remove

Model Pricing Table

from Dashboard.

Move to Billing.

---

7. Channels v2

Current issue:

Looks like a database table.

Goal:

Channels should feel like infrastructure assets.

View Mode

Card Grid

Default

Card Content

Provider Logo

Healthy

Warning

Attention

Danger

Failure

Info

Neutral

Color must indicate state.

Never decoration.

---

16. Dark Mode

Mandatory.

Dark mode is not inverted colors.

Use semantic tokens.

Never hardcode hex colors in components.

---

17. Icon System

Use Lucide.

Reduce Semi Icons.

Rules

Navigation icons

Outlined

Operational states

Filled

No duplicate icon semantics.

---

18. Motion System

Duration

150ms

200ms

250ms

Use only for:

Hover

Drawer

Toast

No decorative animation.

---

19. Responsive Strategy

Desktop First.

Support

1440+

1280

1024

Mobile

Read-only dashboards only.

No mobile administration workflow.

---

20. Anti-Patterns

Do not add pages for future functionality.

Do not add fake metrics.

Do not add decorative charts.

Do not add glassmorphism.

Do not add AI-themed neon effects.

Do not add excessive gradients.

Do not copy OneAPI layouts.

---

21. Success Metrics

After redesign:

Users should identify system health within 10 seconds.

Users should locate a failed request within 30 seconds.

Users should understand AI usage trends within 60 seconds.

Navigation depth should remain ⩽ 2 levels.

Final Principle

Every screen should make enterprise AI activity more visible, more controllable, and easier to understand.
