UniRouter Logs Explorer v2

Version: 1.0

Status: Production Ready Specification

Audience: Product Design Frontend

Priority: P0

Reason:

Logs Explorer is the future foundation of:

- Trace
- X-Insight
- AI Activity Explorer
- Cost Analytics
- Governance Analytics

Product Goal

Logs Explorer answers:

What happened?

Why did it happen?

Who triggered it?

How much did it cost?

Should I take action?

Core Philosophy

Do not design a log table.

Design an investigation workspace.

User Scenarios

Scenario 1

Request failed.

Find reason.

Scenario 2

Cost increased.

Find source.

Scenario 3

Latency increased.

Find bottleneck.

Scenario 4

Provider unstable.

Find impact.

Scenario 5

Audit usage.

Find responsible user.

X-Insight

↓

AI Intelligence Console

No redesign required.

Only additional panels.

Anti Patterns

Do not add charts everywhere.

Do not create another dashboard.

Do not show configuration data.

Do not overload table columns.

Do not add decorative animations.

Success Metrics

Operator finds failed request

< 30 seconds

Operator finds cost anomaly

< 60 seconds

Operator identifies unhealthy provider

< 60 seconds

Operator understands AI activity trend

< 120 seconds

Final Principle

Logs Explorer is not a log viewer.

Logs Explorer is the operational workspace for understanding enterprise AI activity.
